# The Insecticide Resistance Action Committee

Mode of Action Classification Brochure

7th Edition, Version 7.2 – June 2022

Based on the IRAC MoA Classification Version 10.3 and  
Nematicide MoA Classification Version 2.1

**Disclaimer:** While CropLife International and IRAC make every effort to present accurate and reliable information, they do not guarantee the accuracy, completeness, efficacy, timeliness, or correct sequencing of such information. Inclusion of active ingredients on the IRAC Code Lists is based on scientific evaluation of their modes of action; it does not provide any kind of testimonial for the use of a product or a judgment on efficacy. CropLife International and IRAC are not responsible for, and expressly disclaim all liability for, damages of any kind arising out of use, reference to, or reliance on information provided. Listing of chemical classes or modes of action must not be interpreted as approval for use of a compound in a given country. Prior to implementation, each user must determine the current registration status in the country of use and strictly adhere to the uses and instructions approved in that country.

## Foreword

Effective insecticide resistance management (IRM) in conjunction with integrated pest management (IPM) is vital to global crop protection, sustainable agriculture and improved public health, and it is an essential element of responsible product stewardship.

The Insecticide Resistance Action Committee (IRAC) was formed in 1984 and works as a specialist technical group of the industry association CropLife International, to provide a coordinated crop protection industry response to prevent or delay the development of resistance in insect, mite and nematode pests. There are now IRAC country group committees in many parts of the world, researching and responding to local resistance issues, as well as the parent IRAC International group, which provides a coordinating and supporting role at the global level (see also [www.irc-online.org](http://www.irc-online.org)).

Developing new products is becoming increasingly difficult and costly, so it is vital to protect those effective products in the marketplace from the development of resistance. Moreover, with fewer new products being discovered and regulatory pressures reducing the number of older commercial control methods available, the 'toolbox' of usable products is being reduced, making effective IRM more important than ever. The Mode of Action Classification Scheme is a key part of IRAC's global resistance management strategy.

# Insecticide/Acaricide MoA Classification

The CropLife and IRAC member companies support the inclusion of MoA information on product labels which will ensure growers have simple access to critical information to support implementation of resistance management. Further details on MoA Labelling Guidance can be found on the CropLife website under Resources (<https://croplife.org/resources/>)

## Mode of Action Classification

IRAC promotes the use of a Mode of Action (MoA) Classification of insecticides and acaricides as the basis for effective and sustainable resistance management. Actives are allocated to specific groups based on their target site. Reviewed and re-issued periodically, the IRAC MoA Classification Scheme provides farmers, growers, advisors, extension staff, consultants and crop protection professionals with a guide to the selection of acaricides and insecticides in resistance management programs. Effective resistance management of this type preserves the utility and diversity of available insecticides and acaricides. A complete list of the different MoA groups is shown in the following pages, followed by a breakdown of MoAs available for Lepidoptera, aphids, whitefly, plant- and leafhoppers, mites and mosquitoes. For further information, please refer to the full IRAC MoA Classification Scheme on the IRAC website ([www.ircac-online.org](http://www.ircac-online.org)).

## What is Resistance?

Resistance to insecticides may be defined as *'a heritable change in the sensitivity of a pest population that is reflected in the repeated failure of a product to achieve the expected level of control when used according to the label recommendation for that pest species'* (IRAC). Resistance arises through the over-use or misuse of an insecticide or acaricide against a pest species, and results in the Darwinian selection of resistant forms of the pest and the consequent evolution of populations that are resistant to that insecticide or acaricide.

## Effective IRM Strategies: Sequences or Alternations of MoA

All effective insecticide resistance management (IRM) strategies seek to minimise the selection of resistance to any one type of insecticide. In practice, alternations, sequences or rotations of compounds from different MoA groups provide sustainable and effective IRM for insect and mite pests. This ensures that selection from compounds in the same MoA group is minimised, and resistance is less likely to evolve.

Example:

Applications are often arranged into MoA spray windows or blocks that are defined by the stage of crop development, together with the biology and phenology of the species of concern. Local expert advice should always be followed with regard to spray windows and timing. Several sprays may be possible within each spray window, but it is generally essential that successive generations of the pest are not treated with compounds from the same MoA group. IRAC also offers specific recommendations for some MoA groups. Metabolic resistance mechanisms may give cross-resistance between MoA groups; where this is known to occur, the above advice should be modified accordingly. For further information on the use of MoA groups and sub-groups, please see the notes at the end of the brochure and in the full MoA Classification Scheme.

# IRAC Mode of Action Classification Scheme (Classification Version 10.3)

Targeted Physiology: ■ Nerve & Muscle ■ Growth & Development ■ Respiration ■ Midgut ■ Unknown or Non-specific

Note: Rotations for resistance management should be based only on the numbered mode of action groups - see table footnotes for details

Main Group/Primary Site of Action	Subgroup, class or Exemplifying active	Active Ingredients
<b>1 Acetylcholinesterase (AChE) inhibitors</b>  <i>See footnotes for further information on use of compounds between sub-groups.</i>	<b>1A</b> Carbamates	Alanycarb, Aldicarb, Bendiocarb, Benfuracarb, Butocarboxim, Butoxycarboxim, Carbaryl, Carbofuran, Carbosulfan, Ethiofencarb, Fenobucarb, Formetanate, Furathiocarb, Isoprocarb, Methiocarb, Methomyl, Metolcarb, Oxamyl, Pirimicarb, Propoxur, Thiodicarb, Thiofanox, Triazamate, Trimethacarb, XMC, Xyllycarb
	<b>1B</b> Organophosphates	Acephate, Azamethiphos, Azinphos-ethyl, Azinphos-methyl, Cadusafos, Chlorethoxyfos, Chlorfenvinphos, Chlormephos, Chlorpyrifos, Chlorpyrifos-methyl, Coumaphos, Cyanophos, Demeton-S-methyl, Diazinon, Dichlorvos/DDVP, Dicrotophos, Dimethoate, Dimethylvinphos, Disulfoton, EPN, Ethion, Ethoprophos, Famphur, Fenamiphos, Fenitrothion, Fenthion, Fosthiazate, Heptenophos, Imicyafos, Isofenphos, Isopropyl O-(methoxyaminothiophosphoryl) salicylate, Isoxathion, Malathion, Mecarbam, Methamidophos, Methidathion, Mevinphos, Monocrotophos, Naled, Omethoate, Oxydemeton-methyl, Parathion, Parathion-methyl, Phenthoate, Phorate, Phosalone, Phosmet, Phosphamidon, Phoxim, Pirimiphos-methyl, Profenofos, Propetamphos, Prothiofos, Pyraclofos, Pyridaphenthion, Quinalphos, Sulfotep, Tebupirimfos, Temephos, Terbufos, Tetrachlorvinphos, Thiometon, Triazophos, Trichlorfon, Vamidothion
<b>2 GABA-gated chloride channel blockers</b>	<b>2A</b> Cyclodiene organochlorines	Chlordane, Endosulfan
	<b>2B</b> Phenylpyrazoles (Fiproles)	Ethiprole, Fipronil

<p><b>3 Sodium channel modulators</b></p> <p><i>See footnotes for further information on use of compounds between sub-groups.</i></p>	<p><b>3A</b> Pyrethroids Pyrethrins</p>	<p>Acrinathrin, Allethrin, d-<i>cis</i>-trans Allethrin, d-<i>trans</i> Allethrin, Bifenthrin, Bioallethrin, Bioallethrin S-cyclopentenyl, Bioresmethrin, Cycloprothrin, Cyfluthrin, <i>beta</i>-Cyfluthrin, Cyhalothrin, <i>lambda</i>-Cyhalothrin, <i>gamma</i>-Cyhalothrin, Cypermethrin, <i>alpha</i>-Cypermethrin, <i>beta</i>-Cypermethrin, <i>theta</i>-cypermethrin, <i>zeta</i>-Cypermethrin, Cyphenothrin [(1<i>R</i>)-<i>trans</i>- isomers], Deltamethrin, Empenthrin [(<i>EZ</i>)- (1<i>R</i>)- isomers], Esfenvalerate, Etofenprox, Fenpropathrin, Fenvalerate, Flucythrinate, Flumethrin, <i>tau</i>-Fluvalinate, Halfenprox, Imiprothrin, Kadethrin, Permethrin, Phenothrin [(1<i>R</i>)-<i>trans</i>- isomer], Prallethrin, Pyrethrins (pyrethrum), Resmethrin, Silafluofen, Tefluthrin, Tetramethrin, Tetramethrin [(1<i>R</i>)-isomers], Tralomethrin, Transfluthrin</p>
	<p><b>3B</b> DDT Methoxychlor</p>	<p>DDT Methoxychlor</p>
<p><b>4 Nicotinic acetylcholine receptor (nAChR) competitive modulators</b></p> <p><i>See footnotes for further information on use of compounds between sub-groups.</i></p>	<p><b>4A</b> Neonicotinoids</p>	<p>Acetamiprid, Clothianidin, Dinotefuran, Imidacloprid, Nitenpyram, Thiocloprid, Thiamethoxam</p>
	<p><b>4B</b> Nicotine</p>	<p>Nicotine</p>
	<p><b>4C</b> Sulfoximines</p>	<p>Sulfoxaflor</p>
	<p><b>4D</b> Butenolides</p>	<p>Flupyradifurone</p>
	<p><b>4E</b> Mesoionics</p>	<p>Triflumezopyrim</p>
	<p><b>4F</b> Pyridylidenes</p>	<p>Flupyrimin</p>
<p><b>5 Nicotinic acetylcholine receptor (nAChR) allosteric modulators - Site I</b></p>	<p>Spinosyns</p>	<p>Spinetoram, Spinosad</p>
<p><b>6 Glutamate-gated chloride channel (GluCl) allosteric modulators</b></p>	<p>Avermectins, Milbemycins</p>	<p>Abamectin, Emamectin benzoate, Lepimectin, Milbemectin</p>

Main Group/Primary Site of Action	Subgroup, class or Exemplifying active	Active Ingredients
7 Juvenile hormone mimics	7A Juvenile hormone analogues	Hydroprene, Kinoprene, Methoprene
	7B Fenoxycarb	Fenoxycarb
	7C Pyriproxyfen	Pyriproxyfen
8 Miscellaneous non-specific (multi-site) inhibitors	8A Alkyl halides	Methyl bromide and other alkyl halides
	8B Chloropicrin	Chloropicrin
	8C Fluorides	Cryolite (Sodium aluminum fluoride), Sulfuryl fluoride
	8D Borates	Borax, Boric acid, Disodium octaborate, Sodium borate, Sodium metaborate
	8E Tartar emetic	Tartar emetic
	8F Methyl isothiocyanate generators	Dazomet, Metam
9 Chordotonal organ TRPV channel modulators	9B Pyridine azomethine derivatives	Pymetrozine, Pyrfluquinazon
	9D Pyropenes	Afidopyropen
10 Mite growth inhibitors affecting CHS1 <i>10A Sub-grouping information in footnotes</i>	10A Clofentezine Diflovidazin Hexythiazox	Clofentezine, Diflovidazin, Hexythiazox
	10B Etoxazole	Etoxazole

<b>11 Microbial disruptors of insect midgut membranes</b>	<b>11A</b> <i>Bacillus thuringiensis</i> and the insecticidal proteins they produce  <i>See footnotes for further sub-grouping information</i>	<i>Bacillus thuringiensis</i> subsp. <i>israelensis</i> <i>Bacillus thuringiensis</i> subsp. <i>aizawai</i> <i>Bacillus thuringiensis</i> subsp. <i>kurstaki</i> <i>Bacillus thuringiensis</i> subsp. <i>tenebrionis</i>  <i>Bt</i> crop proteins: (see footnote) Cry1Ab, Cry1Ac, Cry1Fa, Cry1A.105, Cry2Ab, Vip3A, mCry3A, Cry3Ab, Cry3Bb, Cry34Ab1/Cry35Ab1
	<b>11B</b> <i>Bacillus sphaericus</i>	<i>Bacillus sphaericus</i>
<b>12 Inhibitors of mitochondrial ATP synthase</b>	<b>12A</b> Diafenthiuron	Diafenthiuron
	<b>12B</b> Organotin miticides	Azocyclotin, Cyhexatin, Fenbutatin oxide
	<b>12C</b> Propargite	Propargite
	<b>12D</b> Tetradifon	Tetradifon
<b>13 Uncouplers of *oxidative phosphorylation via disruption of the proton gradient</b>	Pyrroles Dinitrophenols Sulfluramid	Chlorfenapyr, DNOC, Sulfluramid
<b>14 Nicotinic acetylcholine receptor (nAChR) channel blockers</b>	Nereistoxin analogues	Bensultap, Cartap hydrochloride, Thiocyclam, Thiosultap-sodium

Main Group/Primary Site of Action	Subgroup, class or Exemplifying active	Active Ingredients
15 Inhibitors of chitin biosynthesis affecting CHS1	Benzoylureas	Bistrifluron, Chlorfluazuron, Diflubenzuron, Flucycloxuron, Flufenoxuron, Hexaflumuron, Lufenuron, Novaluron, Noviflumuron, Teflubenzuron, Triflumuron
16 Inhibitors of chitin biosynthesis, type 1	Buprofezin	Buprofezin
17 Moulting disruptors, Dipteran	Cyromazine	Cyromazine
18 Ecdysone receptor agonists	Diacylhydrazines	Chromafenozide, Halofenozide, Methoxyfenozide, Tebufenozide
19 Octopamine receptor agonists	Amitraz	Amitraz
20 Mitochondrial complex III electron transport inhibitors – Qo site	20A Hydramethylnon	Hydramethylnon
	20B Acequinocyl	Acequinocyl
	20C Fluacrypyrim	Fluacrypyrim
	20D Bifenazate	Bifenazate
21 Mitochondrial complex I electron transport inhibitors	21A METI acaricides and insecticides	Fenazaquin, Fenpyroximate, Pyridaben, Pyrimidifen, Tebufenpyrad, Tolfenpyrad
	21B Rotenone	Rotenone (Derris)

<b>22 Voltage-dependent sodium channel blockers</b> <i>See footnotes for further information on sub-grouping</i>	<b>22A</b> Oxadiazines	Indoxacarb
	<b>22B</b> Semicarbazones	Metaflumizone
<b>23 Inhibitors of acetyl CoA carboxylase</b>	Tetronic and Tetramic acid derivatives	Spirodiclofen, Spiromesifen, Spiropidion, Spirotetramat
<b>24 Mitochondrial complex IV electron transport inhibitors</b>	<b>24A</b> Phosphides	Aluminium phosphide, Calcium phosphide, Phosphine, Zinc phosphide
	<b>24B</b> Cyanides	Calcium cyanide, Potassium cyanide, Sodium cyanide
<b>25 Mitochondrial complex II electron transport inhibitors</b> <i>See footnotes for further information on sub-grouping</i>	<b>25A</b> <i>beta</i> -Ketonitrile derivatives	Cyenopyrafen, Cyflumetofen
	<b>25B</b> Carboxanilides	Pyflubumide
<b>28 Ryanodine receptor modulators</b>	Diamides	Chlorantraniliprole, Cyantraniliprole, Cyclaniliprole, Flubendiamide, Tetraniliprole
<b>29 Chordotonal organ modulators - undefined target site</b>	Flonicamid	Flonicamid

Main Group/Primary Site of Action	Subgroup, class or Exemplifying active	Active Ingredients
30 GABA-gated channel allosteric modulators	Meta-diamides Isoxazolines	Broflanilide Fluxametamide Isocycloseram
31 Baculoviruses Host-specific occluded pathogenic viruses	Granuloviruses (GVs)  Nucleopolyhedroviruses (NPVs)	<i>Cydia pomonella</i> GV <i>Thaumatotibia leucotreta</i> GV <i>Anticarsia gemmatalis</i> MNPV <i>Heliocoverpa armigera</i> NPV
32 Nicotinic acetylcholine receptor (nAChR) allosteric modulators - Site II	GS-omega/kappa HXTX-Hv1a peptide	GS-omega/kappa HXTX-Hv1a peptide
33 Calcium-activated potassium channel (KCa2) modulators	Acynonapyr	Acynonapyr
34 Mitochondrial complex III electron transport inhibitors – Qi site	Flometoquin	Flometoquin
UN Compounds	Azadirachtin	Azadirachtin
	Benzoximate	Benzoximate
	Benzpyrimoxan	Benzpyrimoxan
	Bromopropylate	Bromopropylate
	Chinomethionat	Chinomethionat

	Dicofol	Dicofol
	Lime sulfur	Lime sulfur
	Mancozeb	Mancozeb
	Pyridalyl	Pyridalyl
	Sulfur	Sulfur
<b>UNB Bacterial agents * (non-Bt)</b>		<i>Burkholderia spp</i> <i>Wolbachia pipientis (Zap)</i>
<b>UNE Botanical essence * including synthetic, extracts and unrefined oils</b>		<i>Chenopodium ambrosioides near ambrosioides</i> extract Neem oil Fatty acid monoesters with glycerol or propanediol
<b>UNF Fungal agents</b>		<i>Beauveria bassiana</i> strains <i>Metarhizium anisopliae</i> strain F52 <i>Paecilomyces fumosoroseus</i> Apopka strain 97
<b>UNM Non-specific * mechanical and physical disruptors</b>		Diatomaceous earth Mineral oil
<b>UNP Peptides</b>		
<b>UNV Viral agents (non * baculovirus)</b>		

**Targeted Physiology:**   Nerve & Muscle   Growth & Development   Respiration   Midgut   Unknown or Non-specific

The colour scheme in the table associates mode of action into broad categories based on the physiological functions affected, as an aid to understanding symptomatology, speed of action and other properties of the insecticides, and not for any resistance management purpose.

**Rotations for resistance management should be based only on the numbered mode of action groups.**

## IRAC Mode of Action Classification Scheme – Table Notes & Subgroups

### Table Notes:

- Inclusion of an insecticidal agent in the classification above does not necessarily signify regulatory approval.
- MoA assignments will usually involve identification of the target protein responsible for the biological effect, although groupings can be made where insecticidal agents share distinctive physiological effects and are structurally related.
- Groups 26 and 27 are unassigned at this time and have therefore been omitted from the table.
- An insecticidal agent with an unknown or controversial MoA or an unknown mode of toxicity will be held in group 'UN' or 'UNB', 'UNE', 'UNF', 'UNM', 'UNP', UNV as applicable until evidence becomes available to enable assignment to a more appropriate MoA class.
- Actives in groups marked with an asterisk are thought not to share a common target site and therefore may be freely rotated with each other unless there is reason to expect cross-resistance. These groups are 8, 13, UN, UNB, UNE, UNF, UNM, UNP and UNV.
- Different baculoviruses that target different insect orders may be used together without compromising their resistance management. Rotation between certain specific baculoviruses may provide resistance management benefits for some pests. Consult product-specific recommendations.

### Sub-Groups:

Sub-groups represent distinct chemical classes that are believed to have the same MoA but are different enough in chemical structure or mode of interaction with the target protein that the chance of selection for either metabolic or target-site cross-resistance is reduced compared to close analogs. Sub-groups may also distinguish compounds that are chemically similar but known to bind differently within the target or to have differential selectivity among multiple targets.

The cross-resistance potential between sub-groups is higher than that between different groups, so rotation between sub-groups should be avoided. In exceptional circumstances (i.e. where effective registered insecticides from other mode of action groups are unavailable) rotation may be considered following consultation with local expert advice and where cross-resistance does not exist. These exceptions should not be considered sustainable resistance management strategies, and alternative options should be sought to maintain pest susceptibility.

Sub-group	Notes
3B	Because DDT is no longer used in agriculture, this is only applicable for the control of human disease vectors such as mosquitoes.
4A, 4B, 4C, 4D, 4E, 4F	Although these compounds are believed to have the same target site, current evidence indicates that the risk of metabolic cross-resistance between subgroups is low.
10A	Hexythiazox is grouped with Clofentezine because they exhibit cross-resistance, even though they are structurally distinct. Diflovidazin has been added to this group because it is a close analogue of Clofentezine and is expected to have the same mode of action.
11A	Different <i>Bacillus thuringiensis</i> products that target different insect orders may be used together without compromising their resistance management. Rotation between certain specific <i>Bacillus thuringiensis</i> microbial products may provide resistance management benefits for some pests. Consult product-specific recommendations. <b>B.t. Crop Proteins:</b> Where there are differences among the specific receptors within the midguts of target insects, transgenic crops containing certain combinations of the listed proteins provide resistance management benefits.
20	While there is strong evidence that Bifenazate acts on the Qo site of Mitochondrial Complex III and some Bifenazate resistance mutations confer cross-resistance to Acequinocyl, the sites of action of Flucrypyrim and Hydramethylnon have not been determined.
22A, 22B	Although these compounds are believed to have the same target site, current evidence indicates that the risk of metabolic cross-resistance between subgroups is low.
25A, 25B	Although these compounds are believed to have the same target site, current evidence indicates that the risk of metabolic cross-resistance between subgroups is low.

## Nerve & Muscle Targets

1. Acetylcholinesterase (AChE) inhibitors  
1A: *Carbamates*  
1B: *Organophosphates*
2. GABA-gated chloride channel blockers  
2A: *Cyclodiene Organochlorines*  
2B: *Phenylpyrazoles*
3. Sodium channel modulators  
3A: *Pyrethrins, Pyrethroids*
4. Nicotinic acetylcholine receptor (nAChR) competitive modulators  
4A: *Neonicotinoids*  
4F: *Pyridylidenes*
5. Nicotinic acetylcholine receptor (nAChR) allosteric modulators Site I  
5 *Spinosyns*
6. Glutamate-gated chloride channel (GluCl) allosteric modulators  
6: *Avermectins, Milbemycins*
14. Nicotinic acetylcholine receptor (nAChR) channel blockers  
14: *Nereistoxin analogues*
22. Voltage-dependent sodium channel blockers  
22A: *Oxadiazines*  
22B: *Semicarbazones*
28. Ryanodine receptor modulators  
28: *Diamides*
30. GABA-gated chloride channel allosteric modulators  
30: *Meta-diamides, Isoxazolines*
32. Nicotinic acetylcholine receptor (nAChR) allosteric modulators Site II  
32: *GS-omega/kappa HXTX-HV1a Peptide*

## Lepidoptera - Mode of Action Classification by Target Site

### Unknown or uncertain MoA

*Azadirachtin, Pyridalyl, Beauveria bassiana, Burkholderia spp, Paecilomyces fimosorosus*

## Respiration Targets

13. Uncouplers of oxidative phosphorylation via disruption of the proton gradient  
13: *Chlorfenapyr*
21. Mitochondrial complex I electron transport inhibitors  
21A: *METI acaricides and insecticides (Tolfenpyrad)*
34. Mitochondrial complex III electron transport inhibitors – Qi site  
34: *Flometoquin*

## Midgut Targets

11. Microbial disruptors of insect midgut membranes  
11A: *Bacillus thuringiensis*,  
11B: *Bacillus sphaericus*
31. Baculoviruses  
31: *Host-specific occluded pathogenic viruses*  
*Granuloviruses*,  
*Nucleopolyhedroviruses*

## Growth & Development Targets

7. Juvenile hormone mimics  
7A: *Juvenile hormone analogues (Hydroprene)*  
7B: *Fenoxycarb*
15. Inhibitors of chitin biosynthesis affecting CHS1  
15: *Benzoylureas*
18. Ecdysone receptor agonists  
18: *Diacylhydrazines*

## Nerve & Muscle Targets

1. Acetylcholinesterase (AChE) inhibitors  
1A: *Carbamates*  
1B: *Organophosphates*
2. GABA-gated chloride channel blockers  
2A: *Cyclodiene Organochlorines*  
2B: *Phenylpyrazoles*
3. Sodium channel modulators  
3A: *Pyrethrins, Pyrethroids*
4. Nicotinic acetylcholine receptor (nAChR) competitive modulators  
4A: *Neonicotinoids*  
4C: *Sulfoximines*  
4D: *Butenolides*  
4E: *Mesoionics*  
4F: *Pyridylidenes*
9. Chordotonal organ TRPV channel modulators  
9B: *Pyridine azomethine derivatives*  
9D: *Pyropenes*
22. Voltage-dependent sodium channel blockers  
22A: *Oxadiazines*
28. Ryanodine receptor modulators  
28: *Diamides (Cyantraniliprole)*
29. Chordotonal organ modulators – undefined target site  
29: *Flonicamid*
30. GABA-gated chloride channel allosteric modulators  
30: *Isoxazolines*
32. Nicotinic acetylcholine receptor (nAChR) allosteric modulators Site II  
32: *GS-omega/kappa HXTX-HV1a Peptide*

## Aphids, Whiteflies, Planthoppers and Leafhoppers - Mode of Action Classification by Target Site

MoA Group	Aphids	Whiteflies	Planthoppers Leafhoppers
1A	X	X	X
1B	X	X	X
2A	X	X	X
2B			X
3A	X	X	X
4A	X	X	X

23	X	X	
28	X	X	X
29	X	X	X
30		X	
32	X	X	
34		X	

## Respiration Targets

12. Inhibitors of mitochondrial ATP synthesis  
12A: *Difenthiuron*
21. Mitochondrial complex I electron transport inhibitors  
21A: *METI acaricides and insecticides (Pyridaben, Tolfenpyrad)*
34. Mitochondrial complex III electron transport inhibitors – Qi site  
34: *Flometoquin*

## Growth & Development Targets

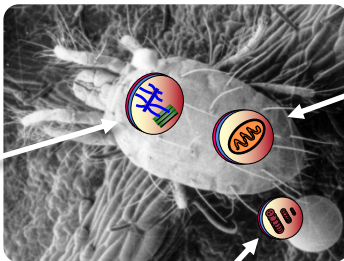

7. Juvenile hormone mimics  
7A: *Kinoprene*  
7C: *Pyriproxyfen*
15. Inhibitors of chitin biosynthesis, affecting CHS1  
15: *Benzoylureas*
16. Inhibitors of chitin biosynthesis, type 1  
16: *Buprofezin*
23. Inhibitors of acetyl CoA carboxylase  
23: *Tetronic & Tetramic acid derivatives*

The table lists the main mode of action groups for the control of aphids, whiteflies and hoppers. However, the availability may differ regionally due to registration status.

## Nerve & Muscle Targets

1. Acetylcholinesterase (AChE) inhibitors  
1A: *Carbamates*  
1B: *Organophosphates*
2. GABA-gated chloride channel blockers  
2A: *Cyclodiene Organochlorines*
3. Sodium channel modulators  
3A: *Pyrethrins, Pyrethroids*
5. Nicotinic acetylcholine receptor (nAChR) allosteric modulators – site I  
5: *Spinosyns*
6. Glutamate-gated chloride channel (GluCl) allosteric modulators  
6: *Avermectins, Milbemycins*
19. Octopamine receptor agonists  
19: *Amitraz*
32. Nicotinic acetylcholine receptor (nAChR) allosteric modulators Site II  
32: *GS-omega/kappa HXTX-HV1a Peptide*
30. GABA-gated chloride channel allosteric modulators  
30: *Isoxazolines*
33. Calcium-activated potassium channel (KCa2) modulators  
33: *Acynonapyr*

## **Mites - Mode of Action Classification by Target Site**

## Growth & Development Targets

10. Mite growth inhibitors affecting CHS1  
10A: *Clofentezine, Diflovidazin Hexythiazox*  
10B: *Etoxazole*
15. Inhibitors of chitin biosynthesis affecting CHS1  
15: *Benzoylureas*
23. Inhibitors of acetyl CoA carboxylase  
23: *Tetronic & Tetramic acid derivatives*

## Respiration Targets

12. Inhibitors of mitochondrial ATP synthesis  
12A: *Difenthiuron*  
12B: *Organotin miticides*  
12C: *Propargite*
13. Uncouplers of oxidative phosphorylation via disruption of the proton gradient  
13: *Chlorfenapyr*
20. Mitochondrial complex III electron transport inhibitors – Qo site  
20B: *Acequinocyl*  
20C: *Fluacrypyrim*  
20D: *Bifenazate*
21. Mitochondrial complex I electron transport inhibitors  
21A: *METI acaricides*
25. Mitochondrial complex II electron transport inhibitors  
25A: *Cyenoptyrafen, Cyflumetofen*  
25B: *Pyflubumide*
34. Mitochondrial complex III electron transport inhibitors – Qi site  
34: *Flometoquin*

## Unknown or uncertain MoA

*Benzoximate, Chinomethionat, Dicofof*

## Mosquitoes - Mode of Action Classification by Target Site

### Nerve & Muscle Targets (Larvae)

1. Acetylcholinesterase (AChE) inhibitors  
*1B: Organophosphates*
5. Nicotinic acetylcholine receptor (nAChR) allosteric modulators – site I  
*5: Spinosyns*

### Growth & Development Targets (Larvae)

7. Juvenile hormone mimics  
*7A: Juvenile hormone analogues*  
*7C: Pyriproxyfen*
15. Inhibitors of chitin biosynthesis, affecting CHS1  
*15: Benzoylureas*

### Midgut Targets (Larvae)

11. Microbial disruptors of insect midgut membranes  
*11A: Bacillus thuringiensis,*  
*11B: Bacillus sphaericus*

### Nerve & Muscle Targets (Adults)

1. Acetylcholinesterase (AChE) inhibitors  
*1A: Carbamates*  
*1B: Organophosphates*
3. Sodium channel modulators  
*3A: Pyrethrins, Pyrethroids*
4. Nicotinic acetylcholine receptor (nAChR) competitive modulators  
*4A: Neonicotinoids*  
*4D: Butenolides*

### Growth & Development Targets (Adults)

7. Juvenile hormone mimics  
*7C: Pyriproxyfen*

### Respiration Targets (Adults)

13. Uncouplers of oxidative phosphorylation via disruption of the proton gradient  
*13: Chlorfenapyr*

## Active Ingredients (Alphabetical Order) with MoA Classification: INSECTICIDES / ACARICIDES

Abamectin	6	Bifenthrin	3A	Chloropicrin	8B	Dichlorvos/ DDVP	1B
Acephate	1B	Bioallethrin	3A	Chlorpyrifos	1B	Dicofol	UN
Acequinocyl	20B	Bioallethrin S-cyclopentenyl isomer	3A	Chlorpyrifos-methyl	1B	Dicrotophos	1B
Acetamiprid	4A	Bioresmethrin	3A	Chromafenozide	18	Diflovidazin	10A
Acrinathrin	3A	Bistrifluron	15	Clofentezine	10A	Diflubenzuron	15
Acynonapyr	33	Borax	8D	Clothianidin	4A	Dimethoate	1B
Afidopyropen	9D	Boric acid	8D	Coumaphos	1B	Dimethylvinphos	1B
Alanycarb	1A	Broflanilide	30	Cryolite	8C	Dinotefuran	4A
Aldicarb	1A	Bromopropylate	UN	Cyanide	24B	Disodium octaborate	8D
Allethrin	3A	Buprofezin	16	Cyanophos	1B	Disulfoton	1B
<i>alpha</i> -Cypermethrin	3A	<i>Burkholderia spp.</i>	UNB	Cyantraniliprole	28	DNOC	13
Aluminium phosphide	24A	Butocarboxim	1A	Cycloprothrin	3A	<i>d-trans</i> Allethrin	3A
Amitraz	19	Cadusafos	1B	<i>Cydia pomonella</i> GV	31	Emamectin benzoate	6
<i>Anticarsia gemmatalis</i> MNPV	31	Calcium cyanide	24B	Cyenopyrafen	25A	Empenthrin [(EZ)-(1R)-isomers]	3A
Azadirachtin	UN	Calcium phosphide	24A	Cyflumetofen	25A	Endosulfan	2A
Azamethiphos	1B	Carbaryl	1A	Cyfluthrin	3A	EPN	1B
Azinphos-ethyl	1B	Carbofuran	1A	Cyhalothrin	3A	Esfenvalerate	3A
Azinphos-methyl	1B	Carbosulfan	1A	Cyhexatin	12B	Ethiofencarb	1A
Azocyclotin	12B	Cartap hydrochloride	14	Cypermethrin	3A	Ethion	1B
<i>Bacillus thuringiensis</i>	11A	<i>Chenopodium ambrosioides</i> near <i>ambrosioides</i> extract	UNE	Cyphenothrin (1R)- <i>trans</i> -isomers]	3A	Ethiprole	2B
<i>Bacillus sphaericus</i>	11B	Chinomethionat	UN	Cyromazine	17	Ethoprophos	1B
<i>Beauveria bassiana</i> strains	UNF	Chlorantraniliprole	28	<i>d-cis-trans</i> Allethrin	3A	Etofenprox	3A
Bendiocarb	1A	Chlordane	2A	Dazomet	8F	Etoazole	10B
Benfuracarb	1A	Chlorethoxyfos	1B	DDT	3B	Famphur	1B
Bensultap	14	Chlorfenapyr	13	Deltamethrin	3A	Fatty acid monoesters with glycerol or propanediol	UNE
Benzoximate	UN	Chlorfenvinphos	1B	Demeton-S-methyl	1B	Fenamiphos	1B
Benzpyrimoxan	UN	Chlorfluazuron	15	Diafenthiuron	12A		
<i>beta</i> -Cyfluthrin	3A	Chlormephos	1B	Diatomaceous earth	UNM		
<i>beta</i> -Cypermethrin	3A			Diazinon	1B		
Bifenazate	20D						

## Active Ingredients (Alphabetical Order) with MoA Classification: INSECTICIDES / ACARICIDES

Fenazaquin	21A
Fenbutatin oxide	12B
Fenitrothion	1B
Fenobucarb	1A
Fenoxycarb	7B
Fenpropathrin	3A
Fenpyroximate	21A
Fenthion	1B
Fenvalerate	3A
Fipronil	2B
Fonicamid	29
Flometoquin	34
Fluacrypyrim	20C
Flubendimide	28
Flucycloxuron	15
Flucythrinate	3A
Flufenoxuron	15
Flumethrin	3A
Flupyradifurone	4D
Fluxametamide	30
Flupyrimin	4F
<i>gamma</i> -Cyhalothrin	3A
GS-omega/kappa HXTX -Hv1a	32
Halfenprox	3A
Halofenozide	18
<i>Heliocoverpa armigera</i> NPV	31
Heptenophos	1B
Hexaflumuron	15
Hexythiazox	10A

Hydramethylnon	20A
Hydroprene	7A
Imicyafos	1B
Imidacloprid	4A
Imiprothrin	3A
Indoxacarb	22A
Isocylcoseram	30
Isofenphos	1B
Isoprocarb	1A
Isopropyl O- (methoxy -aminothio-phosphoryl) salicylate	1B
Isoxathion	1B
Kadethrin	3A
Kinoprene	7A
<i>lambda</i> -Cyhalothrin	3A
Lepimectin	6
Lime sulfur	UN
Lufenuron	15
Malathion	1B
Mancozeb	UN
Mecarbam	1B
Metaflumizone	22B
Metam	8F
<i>Metarhizium anisopliae</i> strain F52	UNF
Methamidophos	1B
Methidathion	1B
Methiocarb	1A
Methomyl	1A

Methoprene	7A
Methoxychlor	3B
Methoxyfenozide	18
Methyl bromide	8A
Metolcarb	1A
Mevinphos	1B
Milbemectin	6
Mineral Oil	UNM
Monocrotophos	1B
Naled	1B
Neem Oil	UNE
Nicotine	4B
Nitenpyram	4A
Novaluron	15
Noviflumuron	15
Omethoate	1B
Oxamyl	1A
Oxydemeton-methyl	1B
<i>Paecilomyces fumosoroseus</i> Apopka strain 97	UNF
Parathion	1B
Parathion-methyl	1B
Permethrin	3A
Phenothrin [(1R)- <i>trans</i> - isomer]	3A
Phenthoate	1B
Phorate	1B
Phosalone	1B
Phosmet	1B

Phosphamidon	1B
Phosphine	24A
Phoxim	1B
Pirimicarb	1A
Pirimiphos- methyl	1B
Potassium cyanide	24B
Prallethrin	3A
Profenofos	1B
Propargite	12C
Propetamphos	1B
Propoxur	1A
Prothiofos	1B
Pyflubumide	25B
Pymetrozine	9B
Pyraclofos	1B
Pyrethrins (pyrethrum)	3A
Pyridaben	21A
Pyridalyl	UN
Pyridaphenthion	1B
Pyrifluquinazon	9B
Pyrimidifen	21A
Pyriproxyfen	7C
Quinalphos	1B
Resmethrin	3A
Rotenone (Derris)	21B
Silaflufen	3A
Sodium borate	8D
Sodium cyanide	24B

## Active Ingredients (Alphabetical Order) with MoA Classification: INSECTICIDES / ACARICIDES

Sodium metaborate	8D
Spinetoram	5
Spinosad	5
Spirodiclofen	23
Spiromesifen	23
Spiropidion	23
Spirotetramat	23
Sulfotep	1B
Sulfoxaflor	4C
Sulfur	UN
Sulfuramid	13
Sulfuryl fluoride	8C
Tartar emetic	8E
<i>tau</i> -Fluvalinate	3A

Tebufenozide	18
Tebufenpyrad	21A
Tebupirimfos	1B
Teflubenzuron	15
Tefluthrin	3A
Temephos	1B
Terbufos	1B
Tetrachlorvinphos	1B
Tetradifon	12D
Tetramethrin	3A
Tetramethrin [(1 <i>R</i> )-isomers]	3A
Tetraniliprole	28

<i>Thaumatotibia leucotreta</i> GV	31
<i>theta</i> -cypermethrin	3A
Thiacloprid	4A
Thiamethoxam	4A
Thiocyclam	14
Thiodicarb	1A
Thiofanox	1A
Thiometon	1B
Thiosultap-sodium	14
Tolfenpyrad	21A
Tralomethrin	3A
Transfluthrin	3A

Triazamate	1A
Triazophos	1B
Trichlorfon	1B
Triflumuron	15
Triflumezopyrim	4E
Trimethacarb	1A
Vamidotion	1B
<i>Wolbachia pipientis</i> (Zap)	UNB
XMC	1A
Xylylcarb	1A
<i>zeta</i> -Cypermethrin	3A
Zinc phosphide	24A

# Nematicide MoA Classification

This is the first edition to include the newly created Nematicide Mode of Action Classification Scheme. The development of this scheme enables visibility of the modes of action available to control plant-parasitic nematodes. Additionally, the numbering scheme allows clarity of product labelling, supporting the principles of rotation of mode-of-action for resistance management. See the IRAC International website for further information (<https://irac-online.org/teams/nematodes/>) – including a poster and a statement on nematicide resistance risk.

# Nematicide Mode of Action Classification Scheme (Version 2.1)

Targeted Physiology: ■ Nerve & Muscle ■ Growth & Development ■ Respiration ■ Unknown or Non-specific

Main Group/Primary Site of Action		Class or Exemplifying active	Active Ingredients	IRAC/FRAC Group
N-1	Acetylcholinesterase (AChE) inhibitors	A Carbamates	Aldicarb, Benfuracarb, Carbofuran, Carbosulfan, Oxamyl	IRAC: 1A
		B Organophosphates	Cadusafos, Ethoprophos, Fenamiphos, Fosthiazate, Imicyafos, Phorate, Terbufos	IRAC: 1B
N-2	Glutamate-gated chloride channel (GluCl) allosteric modulators	Avermectins	Abamectin	IRAC: 6
N-3	Mitochondrial complex II electron transport inhibitors. Succinate-coenzyme Q reductase.	Pyridinyl-ethyl benzamides; Phenethyl pyridineamides	Fluopyram, Cyclobutrifluram	FRAC: 7
N-4	Inhibitors of acetyl CoA carboxylase	Tetronic and Tetramic acid derivatives	Spirotetramat	IRAC: 23
N-UN	Compounds with unknown Mode of Action		Furfural, Fluensulfone, Fluazaindolizine, Iprodione	
N-UNX	Presumed multi-site inhibitors		1,2-Dibromo-3-chloropropane (DBCP), 1,3-Dichloropropene, Allyl isothiocyanate, Carbon Disulfide, Chloropicrin, Dazomet, Dimethyl Disulfide (DMDS), Ethylene Dibromide, Metam Potassium, Metam Sodium, Methyl Bromide, Methyl Iodide (Iodomethane), Sodium tetrathiocarbonate	IRAC: 8

<b>N-UNB Bacterial agents (non-Bt) *</b>		<i>Bacillus spp., Burkholderia spp., Pasteuria spp., Pseudomonas spp., Streptomyces spp.</i>	
<b>N-UNF Fungal agents *</b>		<i>Actinomyces spp., Arthrobotrys spp., Aspergillus spp., Muscodor spp., Myrothecium spp., Pochonia spp., Purpureocillium lilacinum (syn. Paecilomyces lilacinus), Trichoderma spp.</i>	
<b>N-UNE Botanical or animal derived agents including synthetic, extracts and unrefined oils</b>		Azadirachtin, Camellia Seed Cake, Essential oils, Garlic extract, Pongamia oil, <i>Quillaja saponaria</i> extract, Chitin, Terpenes	

\* Only species with proven nematicidal activity

## Nematodes - Mode of Action Classification by Target Site

### Nerve & Muscle Targets

N-1 Acetylcholinesterase (AChE) inhibitors

1A: *Carbamates*

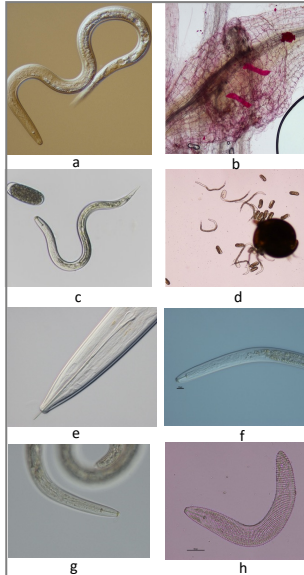

1B: *Organophosphates*

N-2 Glutamate-gated chloride channel (GluCl) allosteric modulators  
*Avermectins*

### Respiration Targets

N-3 Mitochondrial complex II electron transport inhibitors. Succinate-coenzyme Q reductase.  
*Fluopyram, Cyclobutrifluram*

a – Root-knot nematode J2, b – Root-knot nematode J3's in root galls, c – SCN J2 and egg, d – PCN cyst, eggs and J2's, e – Dagger nematode, f – Root lesion nematode, g – Spiral nematode, h – Ring nematode

### Growth & Development Targets

N-4 Inhibitors of acetyl CoA carboxylase  
*Tetronic & Tetramic acid derivatives*

### Unknown or uncertain MoA

N-UN Compounds with unknown Mode of Action

N-UNX Presumed multi-site inhibitors

N-UNB Bacterial agents (non-Bt)

N-UNF Fungal agents

N-UNE Botanical or animal derived agents including synthetic, extracts and unrefined oils

## Active Ingredients (Alphabetical Order) with MoA Classification: NEMATOCIDES

Benfuracarb	N-1A
1,2-Dibromo-3-chloropropane (DBCP)	N-UNX
1,3-Dichloropropene	N-UNX
Abamectin	N-2
<i>Actinomyces spp.</i>	N-UNF
Aldicarb	N-1A
Allyl isothiocyanate	N-UNX
<i>Arthrobotrys spp.</i>	N-UNF
<i>Aspergillus spp.</i>	N-UNF
Azadirachtin	N-UNE
<i>Bacillus spp.</i>	N-UNB
<i>Burkholderia spp.</i>	N-UNB
Cadusafos	N-1B
Camellia Seed Cake	N-UNE
Carbofuran	N-1A

Carbon Disulfide	N-UNX
Carbosulfan	N-1A
Chloropicrin	N-UNX
Cyclobutrifluram	N-3
Dazomet	N-UNX
Dimethyl Disulfide (DMDS)	N-UNX
Essential oils	N-UNE
Ethoprophos	N-1B
Ethylene Dibromide	N-UNX
Fenamiphos	N-1B
Fluazaindolizine	N-UN
Fluensulfone	N-UN
Fluopyram	N-3
Fosthiazate	N-1B
Furfural	N-UN

Garlic extract	N-UNE
Imicyafos	N-1B
Iprodione	N-UN
Metam Potassium	N-UNX
Metam Sodium	N-UNX
Methyl Bromide	N-UNX
Methyl Iodide (Iodomethane)	N-UNX
<i>Muscodor spp.</i>	N-UNF
<i>Myrothecium spp.</i>	N-UNF
Oxamyl	N-1A
<i>Purpureocillium lilacinum (syn. Paecilomyces lilacinus)</i>	N-UNF
<i>Pasteuria spp.</i>	N-UNB
Phorate	N-1B

<i>Pochonia spp.</i>	N-UNF
Pongamia oil	N-UNE
<i>Pseudomonas spp.</i>	N-UNB
<i>Quillaja saponaria</i> extract	N-UNE
Chitin	N-UNE
Sodium tetrathiocarbonate	N-UNX
Spirotetramat	N-4
<i>Streptomyces spp.</i>	N-UNB
Terbufos	N-1B
Terpenes	N-UNE
<i>Trichoderma spp.</i>	N-UNF

### Table Notes:

- Inclusion of a nematode control agent in the table above does not necessarily signify regulatory approval.
- The list is not aimed at being comprehensive but gives key representatives by group.
- N-UNB and N-UNF includes only species with proven nematocidal activity.
